breeder's REVIEW

My name is Nelly Jaehne and I own [Firestone Lodge](#), where I breed and train Friesian/Gypsy Cob Crosses. I have been using Agspand's Feedchar with my stallions, mares and youngstock for 2 years now. They are fed hay and grass, and have Agspand's Feedchar left in a bucket for them to self-medicate. I have witnessed it help with scouring, ulcers, behaviour issues and founder symptoms. I am a proud supporter of Agspand's Feedchar, and happy to share information if contacted.

Firestone Lodge's stallion, Cees, on hay, grass, and Agspand's Feedchar

Why use Agspand's FEEDCHAR™ for animals?

Mycotoxins are compounds in fungi (endophytes) that commonly appear on and in grasses and their seed heads, particularly after seasonal rain and dry spells. Mouldy hay is also problematic. Mycotoxins and high-protein feeds may drop an animal's digestive pH into a lower, acidic range, resulting in such symptoms as **nervous agitation, overheating, skin allergies** and **scouring**.

A quality, Australian-made dietary supplement, **Agspand's Feedchar** is formulated to balance an animal's digestive system's pH within the normal range. This enables microbes to flourish so they can deal with toxins and pathogens, and normalise feed efficiency and nutrient uptake. A restored and effective digestive system supports a strong immune system for all animals.

Agspand's Feedchar can be mixed with feed and other supplements, but also left for animals to self-medicate. Comprising natural ingredients that animals source for themselves in the wild, it has no other additives and virtually no taste or smell to induce animals to eat it, but they do!

A calm, satisfied animal is able to perform its best when supplemented with Agspand's Feedchar.
